Back to Basics!
The X-Ray Film Processor for the new millennium...

Table Top X-Ray Film Processor
The Back to Basics features of the MicroMax are designed to deliver high-output for its compact size.

The MicroMax is value priced to ideally serve the moderate film developing needs of the private practice market, including medical and veterinary clinics, diagnostic and chiropractic care centers as well as mobile diagnostic applications.

MicroMax versatile features:
- Compare for yourself...then come to HOPE.
- MicroMax utilizes Hope's unique low torque, no crossover hard roller transport system
- MicroMax's quiet, powerful, low energy dryer easily dries film under any condition.
- MicroMax's "dual" automatic replenishment system may replenish either by measuring film area or by flooded replenishment with manual operation back-up.
- Film may be delivered either on top or rear exit.
- MicroMax may be installed thru-the-wall at either feed or dryer end. MicroMax may be set up at different speeds from 50 to 125 seconds.
- Plugs into any standard wall outlet.
- Cold water operation - no hot water required.
- Separate drains provide for quick draining of solutions, closed loop operation and easy use of silver recovery systems.
- Light tight feed tray reduces darkroom time and eliminates costly darkroom passage systems.
- Digital display of developer and dryer temperatures.
- Safety and service supported by factory trained worldwide dealer network.

Options available include:
- Short feed tray with light tight cover.
- Rear exit receiving and light trap kit.
- Variable speed control.
- Closed loop system (no exterior plumbing needed).
- Receiving tray insert for full splice films.
- Base stand.

Affordably priced - the MicroMax provides more features and benefits for less!

Can you afford less than the best?
If your reputation for quality is important... remember, HOPE products deliver quality.

MicroMax
- Processing Timer (Leading edge to leading edge):
  Standard Processing Cycle: 135 Seconds
  Intermediate Processing Cycle: 112 Seconds
  Rapid Processing Cycle: 90 Seconds
  *Other processing cycles available
